

HAPPY NEW YEAR!

Multimin Injection For Sheep & Cattle 500ml

WHAT IS MULTIMIN® COPPER-FREE INJECTION?

- MULTIMIN is a unique 3 in 1 trace mineral injection that makes your stock 'performance ready' by improving fertility and immunity.
- MULTIMIN enhances antioxidant systems to improve the health and performance of livestock.
- MULTIMIN is rapidly-absorbed, readily-utilised and provides prolonged antioxidant action to cover 'high demand' periods.
- MULTIMIN is scientifically-proven to improve health and performance of livestock.

RECOMMENDED FOR

- Increasing the number of calves born earlier in the season, giving them an extra 20 to 40 days to perform to the best of their genetic potential
- Improving all three parts of the immune system to make livestock 'performance ready'.

WHY CHOOSE MULTIMIN?

- Boosts availability of essential trace minerals in 'high demand' periods
- Absorbed into the blood within 8 hours and the liver within 24 hours
- Prolonged antioxidant action for months
- Balanced, chelated, and water-based formulation
- Can be used up to nine months after opening

COMPOSITION

- Zinc as disodium zinc EDTA 40mg/mL
- Manganese as disodium manganese EDTA 10mg/mL
- Selenium as sodium selenite 5mg/mL

DOSAGE & DIRECTIONS FOR USE

MULTIMIN is given by subcutaneous injection to cattle at the following dose rate:

- Up to 1 year: 1 mL/50 kg
- 1-2 years: 1 mL/75 kg
- 2 years: 1 mL/100 kg

MULTIMIN is given by subcutaneous injection to sheep over 20 kg at 0.2 mL/10 kg (1 mL/50 kg)

Philmac Rural & Metric pipe repair kits

Product features

Philmac has released a range of pipe repair kits in common metric and rural sizes.

The range is based on the successful 3G Metric and Rural fittings platforms and is provided in a handy package that includes a length of straight pipe, specialised Philmac fittings and step by step easy to follow installation instructions.

This product speeds up the repair process by minimising the amount of soil to be removed to undertake the repair. The Repair Kit will ensure you have everything on hand to complete the repair quickly and efficiently.

Every farm should have a couple hanging in the shed ready to go when required.

Sizes available are: Metric 25, 32, 40, 50 mm Rural 1", 1 1/4", 1 1/2", 2"

Rural Pipe

Philmac

Fast & Easy Installation

Step by step instructions are provided on the product packaging. A simple 6 step process ensures the pipe is repaired quickly with a minimum of fuss.

Repair Pipe

The pipe sample provided meets or exceeds the pressure performance rating of the system and is sufficient in length to adequately cover typical repair requirements.

Minimal Dig

The design of the repair system will ensure that you only need to remove a limited area of soil compared to the traditional repair process, thereby reducing the overall time required to undertake the repair.

Quality

The repair system utilises Philmac fittings that are widely used and relied upon by producers across Australia.

Dates to Remember

First Summer Drench

The importance of a First Summer Drench

One of the most important strategic drenches given to sheep in winter and non-seasonal rainfall areas is the first summer drench.

Why a summer drench?

This drench is given even when the worm egg counts (WEC) are low to ensure low infestation rates when moved onto stubble or to assist with the preparation of low worm risk paddocks for use by the ewes pre-lambing in Autumn and weaners during Winter. As the pasture hays off and the environment gets warmer and drier, the worms cannot survive outside the animals.

Use the drench that works!

The drench you choose needs to remove most of the worms from your sheep. Tridectin, the only moxidectin based three-way drench is ideal for use as a 1st summer drench. Moxidectin the most potent and persistent mectin[®] delivers powerful and lasting broad-spectrum control of worms in sheep. Tridectin has the added advantage of having the shortest ESI of any combination drench making it highly suited for use in prime lambs and other potential sale stock.
